'Housing units' refers to estimated total number of household units, based on census data.
A margin of error (MOE) accompanies each data estimate shown above. The MOE is a data precision meas population value. See more information in Technical Notes.
Percent column (\%) refers to percent of total number of households.

## A. General Population

## 9. Behavioral health by age and disability

State data
Universe (population): Total adult ( $\geq 18$ years) population in Vermont

1. Behavioral Health Condition By Age Group - State Level

| Age Group Years* | Heavy or Binge Drinking |  | Poor Mental Health |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Individuals | \% | Individuals | \% |
| 18-64 | 85,392 | 23\% | 46,885 | 12\% |
| 65+ | 7,827 | 7\% | 5,824 | 5\% |
| 65-69 | 3,621 | 10\% | 1,742 | 5\% |
| 70-74 | 1,999 | 7\% | 1,840 | 7\% |
| 75-79 | 1,403 | 7\% | 664 | 3\% |
| 80+ | 804 | 4\% | 1,577 | 7\% |
| Overall ** | 93,219 | 20\% | 52,709 | 11\% |

Data source: BRFSS 2015 data, variables_RFDRHV5 for heavy drinking (adult men >14 drinks/week; adult women >7 drinks per week);_RFBING5 for binge drinking (males having $\geq 5$ drinks on one occasion, females having $\geq 4$ drinks on one occasion); MENTHLTH for poor mental health ("mental health not good" for at least half the time in previous 30 days); _AGE65YR and _AGEG5YR for age * The BRFSS survey does not collect data for $<18$ year old individuals.

Data reflect estimated numbers of individuals in each category in the state of Vermont, based on 6,489 responses to the BRFSS survey. Responses were weighed to estimate the total number of individuals in Vermont; see further details in Technical Notes.
Percent column (\%) refers to percent of individuals in heavy/binge drinking or poor mental health category for each age category.
** 'Overall' row counts and 'Total' column counts do not include individuals in the categories "Don't know", "Refused" or "Missing" for age (67 survey responses; weighted equivalent of 5,017 or 1\% of the total Vermont population), heavy drinking (319 survey responses; weighted equivalent of 27,964 individuals, or $5.5 \%$ of the total estimated Vermont population), binge drinking (307 survey responses; weighted equivalent of 26,924 individuals, or $5.3 \%$ of total estimated Vermont population), or poor mental health ( 97 survey responses; weighted equivalent of 6,555 individuals, or $1.3 \%$ of Vermont
2. Behavioral Health condition by Age Group and Disability Status - State Level

| Disability Status | Age Group Years* | Heavy or Binge Drinking only No Poor Mental Health |  | Poor MentNo Heavy or BiIndividuals |

Data source: Custom ACS data requested from the U.S. Census Bureau (not publicly available), 2009-2013 five-year estimates. For further information on data and variables used, see Technical Notes.
'Individuals' refers to estimated Individuals of individuals, based on Census data.
A margin of error (MOE) accompanies each data estimate shown above. The MOE is a data precision measure that indicates the range of values expected to contain the true value of an estimate, with a level of confidence of 90 percent. For example, if the population estimate is 100 and the MOE is $+/-20$, then we can be 90 percent certain that the range established by the margin of error, namely 80 to 120 in this example, contains the population value. See more information in Technical Notes.
'Percent' column (\%) refers to percent of 'Total' population within disability group (at all income levels).

Note: Columns for 'under 18 year-olds' have been suppressed, since these estimates were all 0 (no individuals under the age of 18 years living alone).
FPL, Federal Poverty Level, determined using household income during the past 12 months. The ACS does not determine income level for people living in institutional group quarters (such as prisons or nursing homes), college dormitories, military barracks, or in situations without conventional housing (and who are not in shelters), or for unrelated individuals under age 15 (such as foster children). These individuals are excluded from the 'Total' count.

* Values for age categories 18-64 and 65+ have been calculated by summing individual income level categories. MOEs have been calculated per guidance from the U.S. Census Bureau; see further details in Technical Notes.

Data source: Custom ACS data requested from the U.S. Census Bureau (not publicly available), 2009-2013 five-year estimates. For further information on data and variables used, see Technical Notes.
'Individuals' refers to estimated Individuals of individuals, based on Census data.
A margin of error (MOE) accompanies each data estimate shown above. The MOE is a data precision measure that indicates the range of values expected to contain the true value of an estimate, with a level of confidence of 90 percent. For example, if the population estimate is 100 and the MOE is $+/-20$, then we can be 90 percent certain that the range established by the margin of error, namely 80 to 120 in this example, contains the population value. See more information in Technical Notes.
'Percent' column (\%) refers to percent of 'Total' population within disability group (at all income levels).

Note: 'TOTAL' row does not equal the sum of the disability and income level (FPL) subcategories. The 'TOTAL' row includes individuals aged 5 years and over.
Shaded cells show data for population aged 15 years and older only (15-17 for '5-17' age category), of whom 'functional difficulty' is asked by ACS (see below).
 The ACS asks the single 'Cognitive Difficulty' question and two of three of the 'Functional Difficulty' questions of individuals aged 5 years and older, while one of three 'Functional

 subcategories.

Disability Category:
Population age restriction (individuals whom disability question/s are asked in ACS):
Cognitive Difficulty only
5 years and older (1 question)
15 years and older (1 question) and 5 years and older ( 2 questions)
15 years and older (that answered all three 'functional difficulty' questions)
15 years and older (that answered all three 'functional difficulty' questions)
5 years and older (that answered 1 or more of the four cognitive/functional difficulty ACS questions)

FPL, Federal Poverty Level, determined using household income during the past 12 months. The ACS does not determine income status for people living in institutional group quarters (such as prisons or nursing homes), college dormitories, military barracks, or in situations without conventional housing (and who are not in shelters), or for unrelated individuals under age 15 (such as foster children). These individuals are excluded from the 'Total' count.

## Technical notes \& Acknowledgements

## Accompanying current demographic estimates for Vermont

## Time frame for custom ACS data

The Vermont Department of Aging and Independent Living (DAIL) submitted a request for county-level custom ACS data to the U.S. Census Bureau in February 2015. Five-year files were obtained, since only one of 14 counties in Vermont met the 65,000 population threshold for inclusion in one-year files (Chittenden). The most recent five-year data period available at the time of request was 2009-2013.

## Margin of Error

Unless otherwise specified, the data source for the tables in this chart pack is the American Community Survey (ACS). Each estimate from the ACS includes a corresponding statistic, known as the margin of error (MOE). The MOE is a "data precision measure" that helps data users assess the reliability of an estimate. The MOE indicates the variability of the estimate, and whether the estimate is likely to reflect the true value in the entire population. For example, if the population estimate based on the partial survey sample is 100 and the MOE is $+/-20$, then the true value for the entire population could be any value between 80 and 120 . These are also known as lower and upper confidence bounds. They are calculated by adding or subtracting the MOE to/from the estimate. All ACS estimates include MOEs at the $90 \%$ confidence level, meaning that we can be $90 \%$ certain that the true population value lies between the lower and upper confidence bounds. Sampling error results when a survey produces estimates of the whole population using information collected from a portion of the population (Torrieri, 2007).

For more information, see:
U.S. Census Bureau. Things that May Affect Estimates from the American Community Survey. February 2013. Last Revised: June 8, 2015. Available at: http://www.census.gov/programs-surveys/acs/guidance/training-presentations/acs-affect-estimates.html [Accessed 11-8-16]

Torrieri, Nancy. America is Changing, and So Is the Census: The American Community Survey. The American Statistician, Vol. 61, No. 1, February 2007, pp 16-21.

## 'Total' counts for custom ACS data

In tables that indicate 'Custom ACS data' as a data source, the values contained in individual rows (subcategories) may not add up to the 'Total'. This is because these values are Census Bureau estimates that were created using survey data. Each value is estimated individually and rounded separately.

In addition, 'Total' counts for the state of Vermont do not necessarily equal the sum of the estimates for 14 individual counties in Vermont. This is also due to each estimate being calculated individually and rounded separately.

## Custom ACS disability categories

Publicly available ACS data includes the following disability categories:

- Hearing difficulty
- Vision difficulty
- Cognitive difficulty
- Ambulatory difficulty
- Self-care difficulty
- Independent living difficulty

Instead of using these publicly available categories, we chose to request custom disability categories (in tables that indicate data source as 'Custom ACS data'), to better meet the service planning needs of the Vermont Department of Aging and Independent Living (DAIL). In order to approximate the population needing longterm services and supports (LTSS), the 'Functional Difficulty' category was constructed to include those individuals needing assistance with mobility or self-care, i.e. those identified in the ACS as having 'ambulatory difficulty,' 'self-care difficulty' and/or 'independent living difficulty.' This methods has also been used by the University of Massachusetts Medical School in a November 2010 report for the Massachusetts Long-Term Care Financing Committee (referenced below).

Our custom disability categories were constructed using ACS questions, as follows:
Cognitive Difficulty: "Because of a physical, mental, or emotional condition, does this person have serious difficulty concentrating, remembering, or making decisions?" (DREM; ACS survey question \#18a)

## Functional Difficulty:

"Does this person have serious difficulty walking or climbing stairs?" (DPHY, ACS question \#18b) and/or "Does this person have difficulty dressing or bathing?" (DDRS, ACS question \#18c) and/or "Because of a physical, mental, or emotional condition, does this person have difficulty doing errands alone such as visiting a doctor's office or shopping?" (DOUT, ACS question \#19)

The 'Cognitive Difficulty' question (18a) and two of three 'Functional Difficulty' questions (18b and 18c) were asked of individuals aged 5 years and older, and the third 'Functional Difficulty' question (19) was asked of individuals aged 15 years and older.

The resulting questions were grouped as follows, into the following categories:
Cognitive Difficulty only - individuals with DREM only (but not a functional difficulty, response 'no' to DDRS, DPHY and DOUT)
Functional Difficulty only - individuals with DDRS, DPHY or DOUT (any of these; at least one), but no cognitive difficulty (response 'no' to cognitive difficulty, DREM)
Both a Functional and Cognitive Difficulty - Individuals with any of DDRS, DPHY, DOUT or DREM Neither a Functional or Cognitive Difficulty - Individuals who do not have any of DDRS, DPHY, DOUT or DREM (these individuals could have hearing or vision difficulties).

Though imperfect, the custom ACS disability definition maps closely, although not exactly, to other agespecific measures of disability. The custom ACS 'Functional disability' indicator captures a higher portion of the elder population compared with a study by Manton and colleagues (2006) which grouped elders based on needs for assistance with Instrumental Activities of Daily Living (IADL) and Activities of Daily Living (ADLs). In an analysis completed based on the Massachusetts population, the 'Functional disability' indicator estimated that one-third of the elder population needed LTSS, compared with only $19 \%$ identified as needing assistance
with ADLS or IADLs in the Manton study.

## Calculated data - notes on calculation of MOEs for custom ACS data

Where reported values have been calculated by summing individual subcategories (for example, individual age categories for the general population), margins of error (MOEs) have been calculated using a formula recommended by the U.S. Census Bureau:

1) Square MOEs for each component estimate
2) Sum the squared MOEs
3) Take the square root of the sum of the squared MOEs.

For further details on this methodology, see page A-14 in:
Appendix 1, Understanding and Using ACS Single-Year and Multiyear Estimates, in: U.S. Census Bureau, A Compass for Understanding and Using American Community Survey Data: What General Data Users Need to Know U.S. Government Printing Offi ce, Washington, DC, 2008.
Available at: https://www.census.gov/content/dam/Census/library/publications/2008/ acs/ACSGeneralHandbook.pdf. [Accessed 11-7-16]

## Poverty level for custom ACS data

Population/universe: The ACS does not determine poverty status for people in institutional group quarters (such as prisons or nursing homes), college dormitories, military barracks or situations without conventional housing (and who are not in shelters). Additionally, poverty status cannot be determined for unrelated individuals under age 15 (such as foster children; because income questions are asked of people age 15 and older and, if someone is under age 15 and not living with a family member, we do not know their income. Since we cannot determine their poverty status, they are excluded from the "poverty universe" (table totals). For further information on how the ACS calculates poverty, please see:
U.S. Census Bureau. How the Census Bureau Measures Poverty. Last Revised: April 19, 2016. Available at: http://www.census.gov/topics/income-poverty/poverty/guidance/poverty-measures.html [Accessed 11-1016].

Definition used: Tables pertaining to poverty in this Chart Pack reflect 2013 poverty "guidelines" (issued by the U.S. Department of Health and Human Services each year and upated in the Federal Register), rather than poverty "thresholds" (issued by the U.S. Census Bureau each year). Poverty "guidelines" are "a simplification of the poverty thresholds created for administrative use, such as determining financial eligibility for certain federal programs. For specific 2013 'family income' amounts used, please see:

Assistant Secretary for Planning and Evaluation, U.S. Department of Health and Human Services. 2013 Poverty Guidelines. 12/01/2013. Available from: https://aspe.hhs.gov/2013-poverty-guidelines [Accessed 11-7-16]

## Health insurance coverage and payer for custom ACS data

Health insurance coverage and/or types of health insurances in tables using custom ACS data were based on a person's responses to items 16a to 16 h on the ACS questionnaire. Some of the Health Insurance Coverage Types are not mutually exclusive. For example, a person can be tallied in the 'Private Coverage' and 'Medicare' row and either the 'Medicare', 'No Medicaid' category or the 'Both Medicare and Medicaid' category. The same is true for the 'Public Coverage', 'No Private Coverage' and 'Medicaid'.

ACS variables for health insurance coverage (Table B6-Older Adults and C6-Disabled Individuals):
With Health Insurance Coverage: Variable "HICOV" = 1
Without Health Insurance Coverage: Variable "HICOV" $=2$

## ACS variables for health insurance - payer (Table B6 - Older Adults):

Private Coverages: Variables "HINS1" and/or "HINS2" and/or "HINS5"= 1
Public: "HINS3" (Medicare) and/or "HINS4" (Medicaid) and/or "HINS6" and/or "HINS7" = 1

ACS variables for health insurance - payer (Table C6 - Disabled individuals):
Private Coverages: Variables "HINS1" and/or "HINS2" and/or "HINS5"= 1
Medicare: "HINS3" = 1
Medicaid: "HINS4" =1
Both Medicaid and Medicare: "HINS3" = 1 and "HINS4" = 1
Other public: "HINS6" and/or "HINS7" = 1

Detailed information on the ACS Health Insurance items can be obtained from:

Census.gov. Guidance for Data Users - American Community Survey (ACS) - Health Insurance. March 21, 2016. Available at http://www.census.gov/topics/health/health-insurance/guidance/acs.html [Accessed 11-7-16]

## Percent of Household Income Spent on Housing

Median share of household income spent on housing.

## ACS variables:

Renter status: Variable "TENURE" = 3
Owner with mortgage status: Variable "TENURE" = 1
Owner without mortgage status: Variable "TENURE" = 2

Renter expenses as a percent of household income: GRPIP - Gross rent as a percentage of household income past 12 months
Owner house expenses as percent of household income: OCPIP - Selected monthly owner costs as a percentage of household income during the past 12 months

## BRFSS data and variables

Tables A9, A10 and A11 display Behavioral Risk Factor Surveillance System (BRFSS) 2015 data for the state of Vermont. Data represent the estimated numbers of adults (BRFSS only surveys individuals aged 18 years and older) in Vermont, based on 6,489 survey responses that were weighted using a land-line and cell-phone data weighting factor (variable: _LLCPWT). Data variables and categories used are shown below:

Obesity status/BMI: "Body Mass Index/BMI", calculated from height and weight responses (BRFSS variable: _BMI5CAT). Responses were coded into the following three categories:
Obese: "Obese" (BMI >30)
Overweight: "Overweight" (BMI 25-30)
Not Overweight/ Obese: "Underweight" (BMI <18.5) or "Normal weight" (BMI 18.5-25)
'Total' reflects the sum of the above three categories.
Diabetes status: "Ever told you have diabetes" (BRFSS variable: DIABETE3). Responses were coded into the following three categories:
Diabetes: "Yes"
Pre-diabetes: "No, pre-diabetes or borderline diabetes"
No Diabetes: "No"
'Total' reflects the sum of the above three categories, and does not include the responses "Yes, during pregnancy" or "Don't know/ not sure".
Age categories: We report age for adults aged 18-64 and over 65 years (BRFSS variable:_AGE65YR), in addition to reporting the following four age categories for older adults, as 65-69 years, 70-74 years, 75-79 years and 80+ years (BRFSS variable: _AGEG5YR).
Disability: We used the same definition for disability as we used for ACS (Census Bureau) data. 'Disabilty' was defined as having a Cognitive Difficulty, Functional Difficulty, or both. 'No disability' was defined as not having either of these types of difficulties. The BRFSS survey questions we used to construct these four disability categories, are identical to the survey questions asked in ACS, as shown below:

Cognitive Difficulty only: Response 'Yes' to question "Because of a physical, mental, or emotional condition, do you have serious difficulty concentrating, remembering, or making decisions?" (BRFSS variable: DECIDE), and response "No" to all three Functional disability questions below.

Functional Difficulty: Response 'Yes' to any of the follownig three questions (at least one 'yes'): "Do you have serious difficulty walking or climbing stairs?" (BRFSS variable: DIFFWALK), "Do you have difficulty dressing or bathing?" (BRFSS variable: DIFFDRES), or "Because of a physical, mental, or emotional condition, do you have difficulty doing errands alone such as visiting a doctor's office or shopping?" (BRFSS variable: DIFFALON), and a response "No" the the Cognitive Difficulty question above.
Both Cognitive and Functional Difficulty: Response 'Yes' in DECIDE, and 'Yes' in at least one of DIFFWALK, DIFFDRES and DIFFALON variables.

Neither Cognitive nor Functional Difficulty: Response 'No' in all four variables (DECIDE, DIFFWALK, DIFFDRES and DIFFALON).

Heavy Drinking: The BRFSS defines 'heavy drinking' as adult men having more than 14 drinks per week and adult women having more than 7 drinks per week (BRFSS variable: _RFDRHV5 = "yes").
Binge Drinking: The BRFSS defines 'binge drinking' as males having five or more drinks on one occasion, and females having four or more drinks on one occasion (BRFSS variable: _RFBING5 = "yes").
Reported Mental Health Condition: BRFSS question: "Now thinking about your mental health, which includes stress, depression, and problems with emotions, for how many days during the past 30 days was your mental health not good?" (BRFSS variable MENTHLTH). We defined 'Poor mental health' status as reporting at least 14 days in the last 30 days as having 'not good' mental health. This cut-off (14 days or more) was chosen from a recent report published by the Vermont Department of Health (referenced below).
'Overall' row and 'Total' column counts do not include individuals in categories 'Don't know/not sure', 'Refused' or 'Missing' categories.
